

THREE PIECE BALL VALVE ASSEMBLY

Semi-automatic three piece ball valve assembly system is the labor-saving component to meet the demands of high production of three piece ball valve. It is designed to provide a helping solution for valve proper clamping and tighten the stud and nut with same torque every time with the help of pneumatic gun.

only one employee required to manually load valve and tighten the nuts with adequate force – an otherwise tedious and time consuming task which was only possible with fully skilled worker.

Changeovers from one size valve to another are as easy as rotating the hand wheel and changing the flanges with only two bolts only. Machine improves the quality with proper fitting of all valve every time with approximate 50% of time reduction.

Why this system?

- **High Speed**, High output, High Production is equal to **High Profit**.
- **easy clamping** and **unclamping** of valve.
- **easy changeover parts** at valve size changing which provides minimum time for valve change
- Machine **improves the quality** of valves with proper fitting of all valve every time.
- Contact parts are **resistant to flaking, chipping, scuffing** so will not cause any **cosmetic damage** to valves.
- **Increases efficiency** of working because of systematic work. **Saves money** through efficient use of personnel
- **Minimal operator training** required
- **Fast adjustment** reduce downtime and maximize uptime
- Built to be **reliable, trouble-free and dependable** for years of operation
- **INDIAN** made-easy access **to spare parts** and **service assistance with 1 Year Warranty**.
