Gravity Ball Conveyor

Ball transfer tables are ideal when you need manually to rotate or reposition products moving along conveyor belts. They can also be positioned where multiple lines meet, allowing you to move products more easily from one conveyor line to another.

BallTransfers make light work of directing, shifting, rotating, and turning loads in material handling applications. Ball transfers come in four mounting styles: stud, flange, countersunk, and drop-in. At Eminence, Balls are available in zinc plated carbon steel, stainless steel, or nylon. All ball transfer units are sealed and lubricated for long life except the nylon ball unit.

Package glide easily over smooth rolling balls. These single frame rails are custom designed for transfer systems, allows for fast change of load direction. Built for rugged durable use.
