Side Grip Conveyor

The purpose of our Side Grip conveyor is to provide a conveyor line a place to clear out down or broken product and loose debris from the conveyor chain. A common application is to use the over-the-end transfer on a glass line downstream of a bottle squeezer. Good bottles pass through the squeezer and are carried across the gap, while defective bottles shatter and the broken glass goes over the end of the conveyor and into cullet conveyor for recycling. The Side Grip Over-the-End Transfer features the same on-the-fly adjustment featured on our other Side Grip units to allow for different product widths. We will build the unit with as wide a gap as you want between the infeed and discharge conveyors, allowing us to accommodate a wide range of product heights.

Eminence make lowerators and elevators are designed with a heavy duty construction. The standard automatic chain lubrication system ensures maximum wear track and chain life. Other standard equipment includes an auto-pneumatic take-up.

Options include:

- Pneumatic idle end take-up
- Save floor space with the small foot print of vertical Elevators, Lowerators, & Bottle Inverting Units
- A quick change over hand crank system provides a adjustment between container diameters
- Grippers provide for a secure but gentle handling of the product
- Integration to upstream and downstream conveyor systems
- Custom motor drive packages to fit any specifications
